Abstract of DE3437868

A wear strip (6) is specified in Figures 1 and 2 which is used to support two conveyor chains (10) of a conveying device. The wear strip is connected to a supporting profile, in such a way that the end of each leg of the inverted U-shaped strip is provided with a bead (9) which encloses part (5) of the supporting profile (2). The supporting profile is arranged on part of the conveying device and is sufficiently high for parts of the conveyor chains (10) to be able to grip under parts of the wear strip (6), which latter parts are situated beneath the supporting profile (2).
